

Full Range

3000k to 1900k

Expanding on our best-in-class *AmbientDim*, we now offer over *1600* delivered lumens in our Graffiti Fixtures. Our **Full Range** source has been engineered to remain as close to the black body locus as possible, creating all the drama of a halogen source. With a high *CRI* and great *R9* through the entire range, this source is perfect for setting the romantic mood.

Mid Range

3000k to 2200k

The **Mid-Range** is a new entrant to the *Ambient Dim* technology family. When 3000k is perfect for the day but if the dimmed result of the **Full Range** is too dramatic, **Mid-Range** hits the mark. With 2200k as the low end, the dimming range is more subtle, evoking a feeling of casual warmth. Like all Ambient Dim sources, the **Mid-Range** reaches the 2200 CCT at 90% dim level and maintains the CCT down to zero.

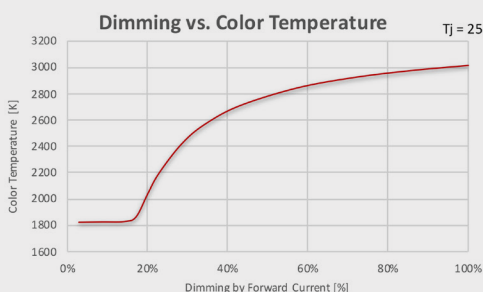

Warm Range

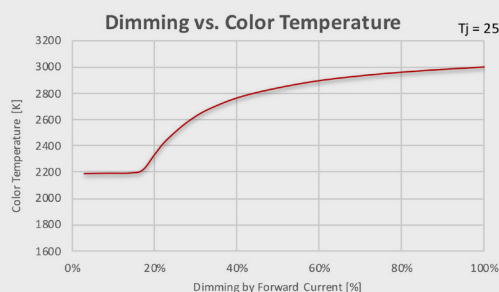

2700k to 2200k

The second new member of the *Ambient Dim* Family is the **Warm Range**. Starting with 2700k at full output, warm tones are richly rendered with a traditional incandescent feel. The **Warm Range** is the perfect choice to create a gentle effect by gradually shifting to a comfortable 2200k at the low end.
